Introductions

Dr. Greta Massetti
Lead of the Community Intervention and Critical Populations Task Force CDC COVID-2019 Response

Expert Panelists:

- Dr. Chris Jones, Deputy Lead, Community Interventions and Critical Populations Task Force
- Jessica Li, MPH, Worker Safety and Health Subject Matter Expert, Health Systems and Worker Safety Task Force, CDC COVID-19 Response
Overview

- Data and statistics
- Guidance and considerations for K-12 schools
- Other topics related to K-12: school food service, sports, social/emotional/mental health, and Halloween
Data and Statistics
US COVID-19 cases reported to the CDC, by state/territory

- As of October 6, 2020
  - Total cases in last 7 days
    306,970
  - Total number of cases
    7,436,278
  - Total deaths
    209,560
Trends in case incidence by age group

Source: CDC Case Report Data
COVID-19 Trends Among School-Aged Children—United States, March 1–September 19, 2020

- Incidence of reported cases among 12–17-year-old children two times higher than that of 5–11-year-old children
- Large increases in positive tests May–mid July; plateau in late July then decrease in August
- Mortality and hospitalization low overall
- Some children at increased risk
  - Among children hospitalized or admitted to an ICU, Hispanic ethnicity, Black race, and underlying medical conditions were more common
Guidance and Considerations for K-12 Schools
Indicators for dynamic school decision-making

- Many state, tribal, local, and territorial public health officials, partners, and members of the public have asked CDC how to determine when it is safer to open schools for in-person learning.

- The core and secondary indicators can aid state, tribal, local, and territorial public health officials in their decision-making process regarding school reopening for in-person learning.

- Each community should decide the most appropriate indicators to reference when deciding to open, close, or reopen schools for in-person learning.

## Core indicators to inform in-person school learning

<table>
<thead>
<tr>
<th>INDICATORS</th>
<th>Lowest Risk of Transmission in Schools</th>
<th>Lower Risk of Transmission in Schools</th>
<th>Moderate Risk of Transmission in Schools</th>
<th>Higher Risk of Transmission in Schools</th>
<th>Highest Risk of Transmission in Schools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of new cases per 100,000 persons within the last 14 days*</td>
<td>&lt;5</td>
<td>5 to &lt;20</td>
<td>20 to &lt;50</td>
<td>50 to ≤ 200</td>
<td>&gt;200</td>
</tr>
<tr>
<td>Percentage of RT-PCR tests that are positive during the last 14 days**</td>
<td>&lt;3%</td>
<td>3% to &lt;5%</td>
<td>5% to &lt;8%</td>
<td>8% to ≤ 10%</td>
<td>&gt;10%</td>
</tr>
<tr>
<td>Ability of the school to implement 5 key mitigation strategies:</td>
<td>Implemented all 5 strategies correctly and consistently</td>
<td>Implemented all 5 strategies correctly but inconsistently</td>
<td>Implemented 3-4 strategies correctly and consistently</td>
<td>Implemented 1-2 strategies correctly and consistently</td>
<td>Implemented no strategies</td>
</tr>
<tr>
<td>• Consistent and correct use of masks</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

</tbody>
</table>

*Number of new cases per 100,000 persons within the last 14 days is calculated by adding the number of new cases in the county (or other community type) in the last 14 days divided by the population in the county (or other community type) and multiplying by 100,000.

**Percentage of RT-PCR tests in the community (e.g., county) that are positive during the last 14 days is calculated by dividing the number of positive tests over the last 14 days by the total number of tests resulted over the last 14 days. Diagnostic tests are viral (RT-PCR) diagnostic and screening laboratory tests (excludes antibody testing and PT-PCR testing for surveillance purposes). Learn more: [https://www.cdc.gov/coronavirus/2019-ncov/lab/resources/calculating-percent-positivity.html](https://www.cdc.gov/coronavirus/2019-ncov/lab/resources/calculating-percent-positivity.html)
Importance of layering of mitigation strategies to the greatest extent possible

- Key mitigation strategies:
  - Consistent and correct use of **masks**
    - For those who may have difficulty, CDC provides adaptation and alternatives
  - **Social distancing** to the largest extent possible
  - Hand hygiene and respiratory etiquette
  - Cleaning and disinfection
  - **Contact tracing** in collaboration with local health department

*Google Search Terms: school reopening indicators, CDC*
When used consistently and correctly, masks are important to help slow the spread of COVID-19

If you are able, find a mask that is made for children.

If you can’t find a mask made for children, check to be sure the mask fits snugly over the nose and mouth and under the chin.

Do NOT put on children younger than 2 years old.
### Additional considerations for the use of masks among K-12 students

<table>
<thead>
<tr>
<th>Possible Student Scenario</th>
<th>Masks Recommended</th>
<th>Masks May Be Considered</th>
<th>Additional Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students are seated less than 6 feet apart while riding a bus or while carpooling</td>
<td>✓</td>
<td></td>
<td>• Masks should always be worn by bus and carpool drivers as able*</td>
</tr>
</tbody>
</table>
| Students are less than 6 feet apart while entering or exiting school (e.g., carpool drop off/pick up) or while transitioning to/from other activities | ✓                 |                         | • Consider having staff monitor students during transitions to encourage correct use and distribute masks as needed.  
• Teachers and staff should wash or sanitize hands (using a hand sanitizer that contains at least 60% alcohol) before and after helping a student put on or adjust a mask. |
| Students are seated at least 6 feet apart in the classroom                                |                   | ✓                       | • Adaptations and alternatives should be considered whenever possible to increase the feasibility of wearing a mask or to reduce the risk of COVID-19 spreading. |
| Students are seated less than 6 feet apart in the classroom, or are engaging in learning stations or circle time that require close contact | ✓                 |                         | • Schools may consider keeping students in “cohorts.” Cohorts are groups of students that do not mix with other cohorts/groups of students throughout the school day.  
• Adaptations and alternatives should be considered whenever possible to increase the feasibility of wearing a mask or to reduce the risk of COVID-19 spreading. |
| Students are less than 6 feet apart while transitioning between classes or to other activities during the school day | ✓                 |                         | • Schools may consider staggering classroom transition times and allow only one-way pathways/hallways.  
• Adaptations and alternatives should be considered whenever possible to increase the feasibility of wearing a mask or to reduce the risk of COVID-19 spreading. |

Monitoring and evaluating mitigation strategies implemented in K-12 schools

- Important to have systems in place for the monitoring and evaluation of COVID-19 mitigation strategies

- Updated considerations from CDC include:
  - Example evaluation questions
    - Which mitigation strategies are being implemented in K-12 schools in my area (i.e., school, district, city, state), and how and when are they implemented?
  - Example indicators
    - Policies and infrastructure for isolation of symptomatic students, faculty, and staff
  - Example data sources
    - School/District policies and recommendations

Interim considerations for testing for K-12 school administrators and public health officials

- **Available soon:** Considerations for antigen testing in school settings
  - Intended for K-12 school administrators working in collaboration with their state, tribal, local, and territorial public health officials
- Part of a comprehensive strategy and should be used in conjunction with—
  - Promoting behaviors that reduce spread
  - Maintaining healthy environments
  - Maintaining healthy operations
  - Preparing for when someone gets sick
Interim guidance for case investigation and contact tracing in K-12 schools

- Health department collaboration with the K-12 school will vary
  - Scenario 1: Health Department asks K-12 school for help in understanding the risk for transmission in the school community and help to identify exposures and contacts in the school setting
  - Scenario 2: Health Department asks K-12 school to identify contacts among the immediate community of students, teachers, and staff affected by the case
  - Scenario 3: Health Department conducts contact tracing without directly engaging the K-12 school

K-12 guidance and tools under development

Guidance:
- Considerations for Testing (K-12 and IHE)
- Update to the Child Care Programs Guidance

Tools:
- K-12 Schools – Assessment Toolkit for COVID-19
- FAQs for Teachers Going Back to School
- Mask messages for kids/parents (School Kids series and IHE series)
- Teacher and Staff Planning Tool and Checklist for Back To School
- Schools/Classroom Sample Layouts
Other Topics Related to K-12: Sports, Social/Emotional/Mental Health, & Fall Holidays
School food service considerations

- In-person learning or hybrid
  - Serve individually plated or pre-packaged meals
  - As feasible, have children eat meals outdoors or in classrooms, while maintaining social distance (at least 6 feet apart) as much as possible, instead of in a communal dining hall or cafeteria
  - Ensure children do not share food or utensils

- Virtual learning
  - Consider innovative school meal service models (e.g., curbside pick-up, school bus delivery)
Considerations for youth sports

COVID-19 Parental Resources Kit

Board Game: Protect Others & Protect Yourself from COVID-19
Suggested for Ages 6-12 years

DIRECTIONS
1. Cut out game pieces.
2. Follow the path one space at a time and scan the QR codes to learn tips to protect others and yourself.
3. Use CDC’s COVID-19 Parental Resources Kit to learn more about ways to prevent and cope with COVID-19.

TIPS
- TIP #1: Keep a distance of at least 6 feet (about 2 arms lengths) between yourself and people who do not live with you, indoors and outdoors.
- TIP #2: Masks can help prevent people who have COVID-19 from spreading it to others. You can protect people around you by wearing your mask.
- TIP #3: Wash your hands with soap and water for at least 20 seconds. Handwashing is one of the best ways to prevent getting sick and avoid spreading.
- TIP #4: At home, it is important to keep frequently touched surfaces clean. Make it a team effort – ask your parents if you can help.

Cut out your character of choice!

Considerations for fall and winter holidays

Factors to consider:

– Community levels of COVID-19
– Location of gathering
– Duration of gathering
– Number of people at gathering
– Location attendees are traveling from
– Behaviors of attendees before gathering
– Behaviors of attendees during gathering

Google Search Terms: holidays COVID-19, CDC
Halloween activities for school-age children

- Lower risk activities
  - Carving or decorating pumpkins outside, at a safe distance
  - Virtual Halloween costume contest

- Moderate risk activities
  - Outdoor costume party where protective masks are used and people remain more than 6 feet apart (costume masks are not a substitute for cloth masks)

- Higher risk activities (to be avoided)
  - Traditional trick-or-treating
  - Crowded costume parties
  - Indoor haunted houses where people might be crowded together
Summary

- Local health officials, school administrators, and communities can use CDC’s guidance and considerations to prepare, plan, and respond to COVID-19
  - When making decisions about beginning, continuing, or pausing in-person learning
  - When implementing, monitoring and evaluating K-12 school mitigation strategies
  - When testing for COVID-19 among K-12 populations
  - When conducting K-12 school contact tracing and case investigation

- CDC’s guidance is meant to supplement—not replace—any state, tribal, local, or territorial health and safety laws, rules, and regulations with which schools must comply
